# **Revenue & Financing Policy**

Draft – last reviewed 14 April 2021

## 1. Policy purpose

The purpose of the Revenue & Financing Policy is to provide predictability and certainty about sources and levels of funding available to the council. It explains the rationale for, and the process of, selecting various tools to fund the operating and capital expenditures of the Council.

## 2. Introduction

The Revenue & Financing Policy is largely the same that was used in Council's previous Long Term Plan. The Rural fire activity has been removed due to this service no longer being provided by council. Council is therefore proposing no significant changes. There has been a change to the way the funding splits are described in the policy these are now in percentage bands rather than one set percentage as in our previous policy.

## General policies on funding and sources of funding

## The distribution of benefits

For the purpose of allocation of costs of each Council activity among individuals, groups of individuals and the entire community, it is essential to identify the beneficiaries and the relevant cost of the service used. Economic theory provides three concepts that could be applied to share costs according to beneficiaries.

## **Public Goods**

At one extreme are the pure public goods which have two defining characteristics: non-rivalry and non-excludability.

Non-rivalry means that consumption by one party does not reduce the amount of that good or service available to others. In other words, there is no extra cost involved in the consumption of such good or service increases. So the cost is not related to the amount consumed (e.g. Libraries).

Non-excludability means that it is impossible or extremely costly and difficult to exclude anyone from consuming if they do not pay for the good or the service.

If a good or service has both these two characteristics, it is a pure public good and it will not be possible to allocate the costs to the users of the good or the service.

Because of this, the costs of such goods and services need to be borne by the public as a whole (through rates). Parks and reserves are an example of a service that has the characteristics of a public good.

## **Private Goods**

At the other extreme are the pure private goods that have the opposite characteristics – rivalry and excludability. If the service provided by Council benefits identifiable parties and the costs related to the services used by them can be allocated directly to them, such services are called private goods. The costs of these services can be recovered from the consumers in the form of user charges or targeted rates.

## **Positive Externalities**

The consumption of private goods and services can result in benefits to third parties – people who don't directly use them. These "spill over effects" or "positive externalities" are also called public or social benefits. They might include the contribution that public toilets make to tourism, libraries, museums and parks make to the social and cultural life and vibrancy of a city. The existence of externalities call for the sharing of costs between the private beneficiaries and the community as a whole. The differentiation of private and public goods and the identification of externalities are necessary for the strict apportionment of costs between private beneficiaries and the community as a whole. However, a clear differentiation is not easy because, in reality, very few goods and services can be treated as pure private or public; most goods and services have some characteristics of both private and public goods (mixed goods). This leads to the adoption of a mix of funding mechanisms.

## **General rates and differentials**

Council uses general rates as the main source of funding of activities where individual beneficiaries cannot be identified and the allocation of costs to them is not practical or cost effective; or where a part of the benefits accrue to the whole community (directly or indirectly as externalities). The general rates are split into two categories:

- 1. The Uniform Annual General Charge which is a fixed charge per rating unit, the whole District pays the same amount; and
- 2. General rates calculated on property value.

In its decision making on rating policies, including differentials, Council has considered the factors set out in the Local Government Act 2002.

#### Choice of rating system

Council uses the Land Value system to apportion the general rates that are calculated on property value. That is, the total rate requirement arrived at through the Annual Plan process is allocated to properties on the basis of their land value.

Council has considered which rating system is:

- Fairest for most people;
- Easiest for people to understand;
- Efficient for Council to administer; and
- Supported by the public.

In late 2008 public consultation indicated that there was a strong preference in the community for land value rating. Council therefore resolved to continue to rate based on land value. Council has determined that the view of the community has not significantly changed.

#### **Rating differentials**

Council has considered the level of benefit from all of Council's services and has attempted to identify any major differences in benefit between different categories of ratepayers.

This is a difficult exercise as each individual ratepayer uses, or benefits from, a slightly different mix of Council services. Some people use libraries more than average, while others make greater use of the District's roads. Also, every ratepayer is a stakeholder in the future of the District and will therefore benefit to some extent from the provision of services such as libraries and roads which create a District worth living in.

#### **Operational expenditure**

Where expenditure does not create a new asset for future use, or extend the lifetime or usefulness of an existing asset, it is classed as operating expenditure. Most of Council's day-to-day expenditure comes into this category. Council generates sufficient cash inflow from revenue sources (including rates) to meet cash outflow requirements for operating expenditure over the long term.

Operating expenditure includes the overhead costs. The way in which Council allocates its overheads to different areas of Council operation is important for the Revenue and Financing Policy, particularly for services that are funded fully or mostly from user charges. For these services it is important that overheads are generally allocated on a similar basis as if these services were being operated by the private sector – otherwise users may be asked to pay too much.

Council also faces a number of costs that the private sector does not. These costs (such as running Council meetings and holding elections, as well as legal and policy advice, advocacy and consultation) are not treated as an overhead but rather treated as activities in their own right, and are funded on a stand-alone basis.

Operational expenditure includes depreciation.

Each funding method is described in more detail below, including the situations in which Council will use each method.

### **General rates**

Funding from general rates is applied to those activities where it has been deemed that there is a general District-wide benefit to providing the service or where there would be an economic inefficiency to implement a targeted rate.

#### **Targeted rates**

Funding from targeted rates is applied to specific activities where it has been deemed that there is a direct benefit to those ratepayers receiving a particular service (eg Council reticulated water supply).

#### **Fees and charges**

Where Council has deemed there is a direct or partial benefit to the end user (e.g. building control), it is done through fees and charges. For activities where enforcement action is necessary, the "exacerbator pays principle" applies where practical.

The price of the service is set taking account of a number of factors. These could include:

- The cost of providing the service.
- The estimation of the users' private benefit from using the service
- The impact the cost has to encourage or discourage behaviours.
- The impact the cost has on demand for the service.
- Market pricing, including comparability with other councils.
- The impact of rates subsidies if competing with local businesses.

- The cost and efficiency of revenue collection mechanisms.
- The impact of affordability on users.
- Other matters as determined by the Council.

#### Interest

Council receives the majority of its interest relating to the special funds it has set aside. The interest earned on these funds is transferred to the special funds balances. A small amount of interest is returned from time to time where Council has excesses of cash on hand, which is used to offset administration (internal) costs.

#### Borrowing

Not generally used for operating expenditure, except for bridge financing of Port deficits until revenue levels rise to meet all operational expenditure (refer financial strategy for further information).

#### **Proceeds from asset sales**

A few assets – a very small fraction of Council's total value – do not currently make a contribution to the identified community outcomes, except in terms of the revenue they generate. In these cases the benefit to Council and the community from owning the asset is measurable simply as the rate of return.

Council will consider selling such assets where the rate of return from owning the asset is lower than the financial benefit to ratepayers of selling and of using the proceeds of sale to repay debt and/or transfer to Special Funds. In its considerations, Council will take into account the risk associated with continuing to own the asset, and the risks associated with Council's total debt.

Council may consider the sale of parks or roads where any sale and consequent use of funds would have an overall benefit to the community. The same principle will be applied to other individual assets that are part of an essential service provided by Council.

Not generally used for operating expenditure. The exception is for port activities where sale of endowment land is used to offset any current and/or prior year operational losses.

#### **Development contributions**

Not currently levied.

Financial contributions (under the Resource Management Act 1991)

Financial contributions are charged where new development creates increased demand on maintenance of reserves.

#### Grants and subsidies

Council receives the majority of grants and subsidies in the form of financial assistance from the New Zealand Transport Agency (NZTA) and these are used as an operational source of revenue for roading where applicable. Grants and subsidies are used in other activities wherever feasible and it is financially prudent to draw down any such funds. Council acts as funding conduit for local service organizations accessing Crown funding assistance.

#### **Other sources**

Special funds are funds which have either been received by Council from a third party to be used in a specific way (Restricted Funds) or monies tagged by Council to be applied for a specific purpose or area of benefit (Non Restricted Funds). Special funds are used:

- Where funds have been accrued specifically for the purpose; and/or
- Where the expenditure is unexpected and unavoidable.

Operational costs include the funding of any depreciation.

#### **Capital expenditure**

Capital costs, for the purpose of this policy, is spending on assets that provide the community with a service over a longer period of time than operating expenditure.

Capital expenditure is the category of spending which creates a new asset, or extends the lifetime of an existing asset. The following sources are available for Council to fund capital expenditure (the costs of replacing an existing asset are not included here as these costs are progressively expensed as depreciation).

Funding sources:

#### **General rates**

Capital expenditure is not generally funded from rates. Council may opt to fund some capital expenditure from rates where the rates take is within Council's rates increase limit as set in the Financial Strategy and is in keeping with the principles of prudent financial management.

#### **Targeted rates**

Funding from targeted rates is applied to specific activities where it has been deemed that there is a direct benefit to those ratepayers receiving a particular service (eg Council reticulated water supply).

Capital expenditure is not generally funded from rates. Council may opt to fund some capital expenditure from rates where this is in keeping with the principles of prudent financial management.

#### **Fees and charges**

Capital expenditure is not generally funded from fees and charges. Council may opt to fund some capital expenditure from here where this is in keeping with the principles of prudent financial management.

#### Interest

Council receives the majority of its interest relating to the special funds' it has set aside. The interest earned on these funds is transferred to the special funds balances. Council may use the return on these funds to fund capital projects

#### Borrowing

Borrowing is an appropriate funding mechanism to smooth the peaks in capital expenditure. It also enables the costs of major developments to be borne by those who ultimately benefit from the expenditure. This is known as the 'intergenerational equity principle' and means that the costs of any expenditure should be recovered from the community over the period during which benefits from that expenditure accrue. It is not prudent or sustainable for all capital expenditure to be funded from borrowings and Council must balance prudence against equity.

Council will fund capital expenditure in the following priority order:

- 1. Financial Contributions for growth projects
- 2. Grants and Subsidies available
- 3. Available rates funding where the rates rise fits within Council's set rates increase limits.
- 4. Loans

The overriding limits on borrowing are set out in the Liability Management and Investment Policies.

#### Lump sum contributions

Council appreciates that the benefits of capital expenditure are more appropriately spread over the life of the period the benefit is available. On this basis, the preference is to loan fund the expenditure and meet the required loan repayments through revenue such as targeted rates. However Council will, in particular circumstances, consult with affected communities on the options of collecting a lump sum contribution as is available under the rating legislation, to fund the capital costs of new wastewater schemes or water supply.

#### **Proceeds from asset sales**

A few assets – a very small fraction of Council's total value – do not currently make a contribution to the identified council outcomes, except in terms of the revenue they generate. In these cases the benefit to Council and the community from owning the asset is measurable simply as the rate of return.

Council will consider selling such assets where the rate of return from owning the asset is lower than the financial benefit to ratepayers of selling and of using the proceeds of sale to repay debt and/or transfer to Special Funds. In its considerations, Council will take into account the risk associated with continuing to own the asset and the risks associated with Council's total debt.

Council may consider the sale of parks or roads where any sale and consequent use of funds would have an overall benefit to the community. The same principle will be applied to other individual assets that are part of an essential service provided by Council.

Proceeds from asset sales are generally set aside for future use in line with Council's policy on Special Funds. The exception is for Port activities, where sale of endowment land is used to offset any current and/or prior year operational losses.

#### **Development contributions**

Not currently levied.

#### Financial contributions (under the Resource Management Act 1991)

Financial Contributions are charged where the demand for Council development in the present and future is from new development.

#### **Grants and subsidies**

Council receives the majority of grants and subsidies in the form of financial assistance from the New Zealand Transport Agency (NZTA). Subsidies are also used for the development of other infrastructure such as water reticulation and sewage disposal when made available.

#### **Other sources**

Special funds are funds which have either been received by Council from a third party to be used in a specific way (Restricted Funds) or monies tagged by Council to be applied for a specific purpose or area of benefit (Non Restricted Funds). Special funds are used:

- Where funds have been accrued specifically for the purpose; and/or
- Where the expenditure is unexpected and unavoidable.

#### Funding sources of capital costs for Council activities

The above principles will be deliberated when Council is considering any new capital project, and the funding tools used may therefore vary project by project. It is therefore difficult, and inaccurate to try and represent capital funding of each activity graphically.

Please refer to the below funding needs analysis – capital expenditure for each of the funding sources that will be considered.

ACENDA ONIX
